

“Eurocepticism and Bargaining Success in the EU” Codebook

Authors: Nathan Mariano & Christina J. Schneider

Contact: n1marian@ucsd.edu

This file contains information on how to replicate the results in "Eurocepticism and Bargaining Success in the EU" (Journal of European Public Policy). Data and do-files contained in the replication package. For questions or materials related to construction of the variables in the dataset, please contact the authors.

do: bargaining_replication.do

data: BargainingData.dta

output: results_main.tex, results_robust_RR.tex, results_robust1_RR.tex,
results_robust2.tex, sumstat.tex, conflict_RR2.eps,
governmentsupport_RR2.eps, marginsplot_scepticism_RR2.eps,
publicsupport_RR2.eps, success_RR2.eps

Variables Used (see article for additional information)

<i>success_new</i>	Bargaining success, defined as absolute distance between country's initial position (<i>position</i>) and legislative outcome (<i>outcome</i>).
<i>success_rel</i>	Bargaining success, weighted by the salience of the issue to the country. Defined as: $100 - (abs(position - outcome) * salience) / 100$.
<i>success_rell</i>	Bargaining success, weighted by the relative salience of the issue to the country. Defined as: $(abs(position - outcome) * salience_rel) / 100$.
<i>conflict_pos</i>	Pro-EU government & Euroceptic public dummy. Pro-EU gov defined as seat-weighted CMP EU position (<i>gov_eu_cmp_static</i>) ≥ 0 ; Euroceptic public defined as difference between proportion of public who views EU positively and proportion who views EU negatively (<i>eu_avg</i>) < 0 .
<i>conflict_neg</i>	Euroceptic government & pro-EU public dummy. Euroceptic gov defined as seat-weighted CMP EU position (<i>gov_eu_cmp_static</i>) < 0 ; Euroceptic public defined as difference between proportion of public who views EU positively and proportion who views EU negatively (<i>eu_avg</i>) ≥ 0 .
<i>conflict_negl</i>	Euroceptic government & Euroceptic public dummy. Euroceptic gov defined as seat-weighted CMP EU position (<i>gov_eu_cmp_static</i>) < 0 ; Euroceptic public defined as difference between proportion of public

	who views EU positively and proportion who views EU negatively (eu_avg) < 0.
<i>conflict_pos_alt</i>	Pro-EU government & Eurosceptic public dummy. Pro-EU gov defined as seat-weighted CMP EU position ($gov_eu_cmp_static$) ≥ 2.21 ; Eurosceptic public defined as difference between proportion of public who views EU positively and proportion who views EU negatively (eu_avg) < 0.
<i>conflict_pos_alt1</i>	Pro-EU government & Eurosceptic public dummy. Pro-EU gov defined as seat-weighted CMP EU position ($gov_eu_cmp_static$) ≥ 0 ; Eurosceptic public defined as difference between proportion of public who views EU positively and proportion who views EU negatively (eu_avg) < -.018.
<i>conflict_pos3</i>	Pro-EU government & pro-EU public dummy. Pro-EU gov defined as seat-weighted CMP EU position ($gov_eu_cmp_static$) ≥ 0 ; pro-EU public defined as difference between proportion of public who views EU positively and proportion who views EU negatively (eu_avg) ≥ 0 .
<i>conflict_log_3Q</i>	Pro-EU government & Eurosceptic public dummy. Pro-EU gov defined as logit scaled seat-weighted CMP EU position ($gov_eu_cmp_static_log$) ≥ -1.417 (cut point is third quartile in distribution of $gov_eu_cmp_static_log$; log scaling inverts measure, so pro-EU is now governments who are less than the cutpoint). Pro-EU public defined as difference between proportion of public who views EU positively and proportion who views EU negatively (eu_avg) < 0.
<i>conflict_imp</i>	Pro-EU government & Eurosceptic public dummy. Pro-EU gov defined as seat-weighted CMP EU position with missing values imputed ($gov_eu_cmp_static$) ≥ 0 ; pro-EU public defined as difference between proportion of public who views EU positively and proportion who views EU negatively (eu_avg) < 0. Note: this variable is generated in the .do file, not present on BargainingData.dta.
<i>eu_avg</i>	Difference between proportion of public who views EU positively (eu_pos) and proportion who views EU negatively (eu_neg). Source: Eurobarometer.
<i>gov_eu_cmp_static</i>	Government's congressional seat-weighted position on EU integration.
<i>gov_eu</i>	Pro-EU integration government dummy, defined as $gov_EU_cmp_static \geq 0$.

<i>positiondistance_coun</i>	Absolute distance between country's initial position (<i>position</i>) and Council's position (<i>pcouncil</i>). Source: DEU.
<i>positiondistance_ep</i>	Absolute distance between country's initial position (<i>position</i>) and European Parliament's position (<i>pep</i>). Source: DEU.
<i>positiondistance_com</i>	Absolute distance between country's initial position (<i>position</i>) and Commission's position (<i>pcom</i>). Source: DEU.
<i>positiondistance_refpt</i>	Absolute distance between country's initial position (<i>position</i>) and reference point (<i>refpt</i>). Source: DEU.
<i>saliency_rel</i>	Difference between salience country places on the issue (<i>saliency</i>) and average salience for the issue (<i>saliency_avg</i>). Source: DEU.
<i>success_min</i>	Minimum success a country can have given their initial position (<i>position</i>).
<i>qmv</i>	Dummy variable for legislation adopted by qualified majority. Source: DEU.
<i>newmember</i>	Dummy variable for new members after 2004.
<i>involved_dum</i>	Dummy variable for a dummy variable for whether a member was more likely to position itself on issues within a policy proposal than the average Council member, defined as whether they took positions on more than two issues in a given proposal. Source: DEU.
<i>population_log</i>	Log population (<i>population</i>). Source: Eurostat.
<i>gdp_log</i>	Log gdp (<i>gdp</i>). Source: Eurostat.
<i>gdppc</i>	GDP per capita. Source: Eurostat.
<i>finyear</i>	Year that negotiations on a proposal concluded. Source: DEU.
<i>gov_eu_cmp_static_log</i>	Government's congressional seat-weighted position on <i>eu</i> , log scaled. Source: authors' construction, using CMP data.
<i>gov_markeco_cmp_static</i>	Government's congressional seat-weighted position on <i>markeco</i> . Source: CMP, via Wratil DEU-CMP.
<i>gov_planeco_cmp_static</i>	Government's congressional seat-weighted position on <i>planeco</i> . Source: CMP, via Wratil DEU-CMP.

gov_planned_economy_cmp_static Government's congressional seat-weighted position on planned vs. free market economy. Source: CMP, via Wratil DEU-CMP.

gov_free_market_cmp_static Government's congressional seat-weighted position on free market economy. Source: CMP, via Wratil DEU-CMP.

gov_state_involvement_cmp_static Government's congressional seat-weighted position on state involvement. Source: CMP, via Wratil DEU-CMP.

gov_welfare_cmp_static Government's congressional seat-weighted position on welfare. Source: CMP, via Wratil DEU-CMP.

gov_lr_cmp_static Government's congressional seat-weighted position on left-right scale. Source: CMP, via Wratil DEU-CMP.
